¹ GQR conducted a 20-minute online survey among 1,000 Registered Voters nationwide from July 15-19, 2020. Respondents were contacted from a panel sample of nationwide registered voters. Because the sample is based on those who initially self-selected for participation in the panel rather than a probability sample, no estimates of sampling error can be calculated. All sample surveys and polls may be subject to multiple sources of error, including, but not limited to, sampling error, coverage error, and measurement error. If this poll were conducted among a probability sample, then the margin of error would be of +/- 3.1 percentage points at the 95 percent confidence interval; the margin of error is higher among subgroups. The data are statistically weighted to ensure the sample's regional, age, gender and partisan composition reflects that of the estimated Registered Voters nationwide.
